

ChatGPT

I need a js script that does the following:

There is a grid:

1x1, 2x2, 2x4, 3x4, 4x4

And there is a number of values

each section of a grid can hold however many values there are

e.g.

Grid = 2x2

values = 4x

each spot has 1

Grid = 2x2

values = 3x

the first three have 1 the last 0 (because there is nothing remaining)

However:

if i have this:

Grid = 2x2

values = 9x

then it should look like this:

3 | 2

2 | 2

How do I calculate that?
